

Warm Up Problem

Estimate (without counting) how many stars are in the picture and then count to check your answer.

10-30

30-60

60-90

100-120

How many stars do you think your estimate is off by (at most)?

How did you estimate your answer? What strategies did you use?

Count to find the exact number of stars. Was your estimation close?
