# Lesson 2: Tilings and colorings 

Konstantin Miagkov

May 4, 2019

Throughout this whole handout, the tiling pieces can be rotated and reflected in any way.

## Problem 1.

An $8 \times 8$ chess board has the bottom left and top right corners cut out. Can it be tiled by $1 \times 2$ dominoes?

## Problem 2.

a) An $8 \times 8$ chess board has the squares C6 and G2 cut out. Can it be tiled by $1 \times 2$ dominoes?
b) Same question, except with C5 and G2 cut out.

## Problem 3.

Is it possible to tile a $10 \times 10$ square with T-tetrominoes?
A T-tetromino looks like this:

## Problem 4.

A piece of cheese has a shape of a $3 \times 3 \times 3$ cube with the central cube removed. A mouse starts eating a corner cube, and after finishing a cube moves to one of the adjacent cubes. Can the mouse eat all the cheese?

Problem 5.
Show that the $10 \times 10$ board cannot be tiled with $1 \times 4$ rectangles.

## Problem 6.

Is it possible to tile an $8 \times 8$ board with a corner cut out with $1 \times 3$ rectangles?

## Problem 7.

Is it possible to tile an $8 \times 8$ board with $321 \times 2$ dominoes in such a way that 17 of them are horizontal and 15 are vertical?
