

Thm. (Heron's Formula)

$$[ABC] = \sqrt{s(s-a)(s-b)(s-c)}$$

$$s = \frac{a+b+c}{2}$$

Proof 1.  $[ABC] = \frac{1}{2}bc \sin A$

$$a^2 = b^2 + c^2 - 2bc \cos A$$

$$\sin A = \sqrt{1 - \cos^2 A}$$

$$\cos A = \frac{b^2 + c^2 - a^2}{2bc}$$

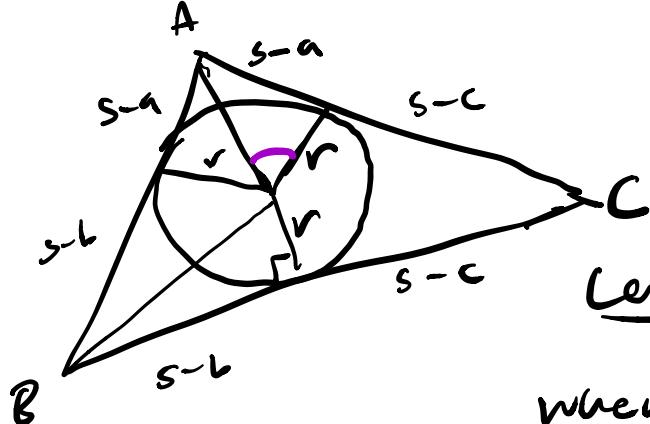

do algebra.

Proof 2. (EGMO Ch 5)

$$\tan(90 - \frac{\angle A}{2}) = \frac{s-a}{r}$$

$$\tan(90 - \frac{\angle B}{2}) = \frac{s-b}{r}$$

$$\tan(90 - \frac{\angle C}{2}) = \frac{s-c}{r}$$

Lemma.  $\tan x + \tan y + \tan z = \tan x \tan y \tan z$

when  $x+y+z=180^\circ$ .

$$\frac{s}{r} = \frac{s-a}{r} + \frac{s-b}{r} + \frac{s-c}{r} = \frac{(s-a)(s-b)(s-c)}{r^3}$$

$$(r^3 \cdot s) \frac{2s}{\cancel{3s - (a+b+c)}} \cdot (r^3 s)$$

$$[ABC] = rs$$

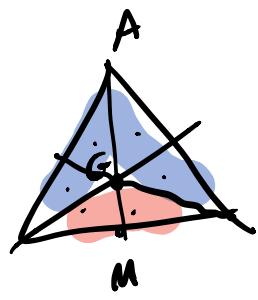

$$r^2 s^2 = s(s-a)(s-b)(s-c) \quad \checkmark$$

$$\begin{aligned} \frac{\sin x}{\cos x} \cdot \frac{\sin y + \sin z}{\cos y \cos z} &= \frac{\sin(x+y)}{\cos x \cos y} + \frac{\sin z}{\cos z} \\ &= \frac{-\cos(x+y)\sin z}{\sin(x+y)\cos z} + \frac{\sin z \cos x \cos y}{\cos x \cos y \cos z} \end{aligned}$$

$$\sin(x+y+z) = 0 \quad (x+y+z=180^\circ)$$

$$= \frac{\cos \sin x \sin y}{\cos x \cos y \cos z}$$

$$\sin z (\cos x \cos y - \cos(x+y))$$

$$\frac{AG}{GM} = \frac{\text{Blue area}}{\text{Red area}} - 2:1$$

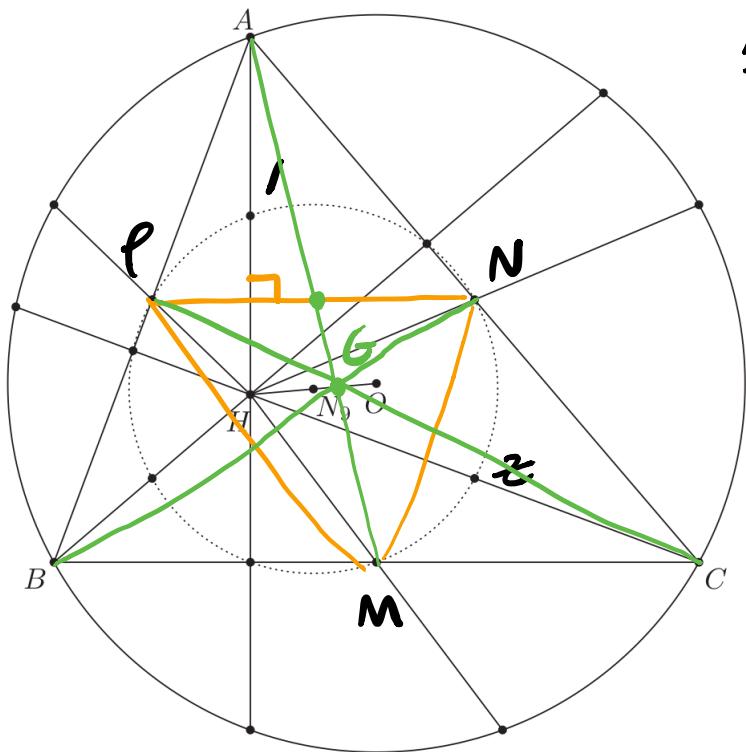

Figure 3.5C. The nine-point circle.

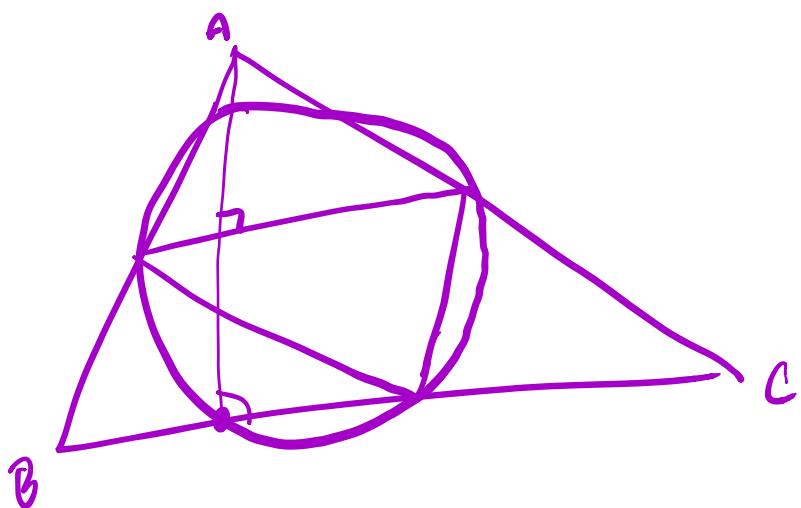

$$\underline{AG:GM = 2:1}$$

Feet of altitudes  
(D, E, F)

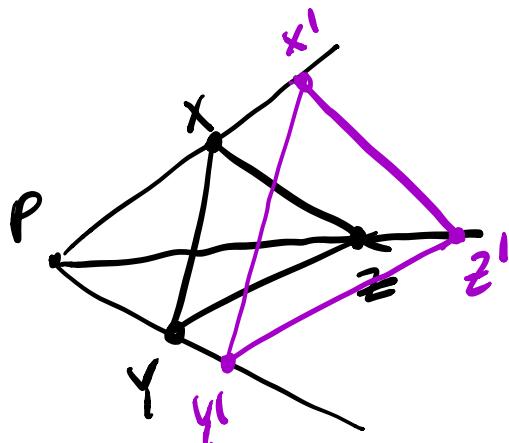

Midpts of sides  
(M, N, P)

Midpts of AH, BH,  
(x, y, z) CH

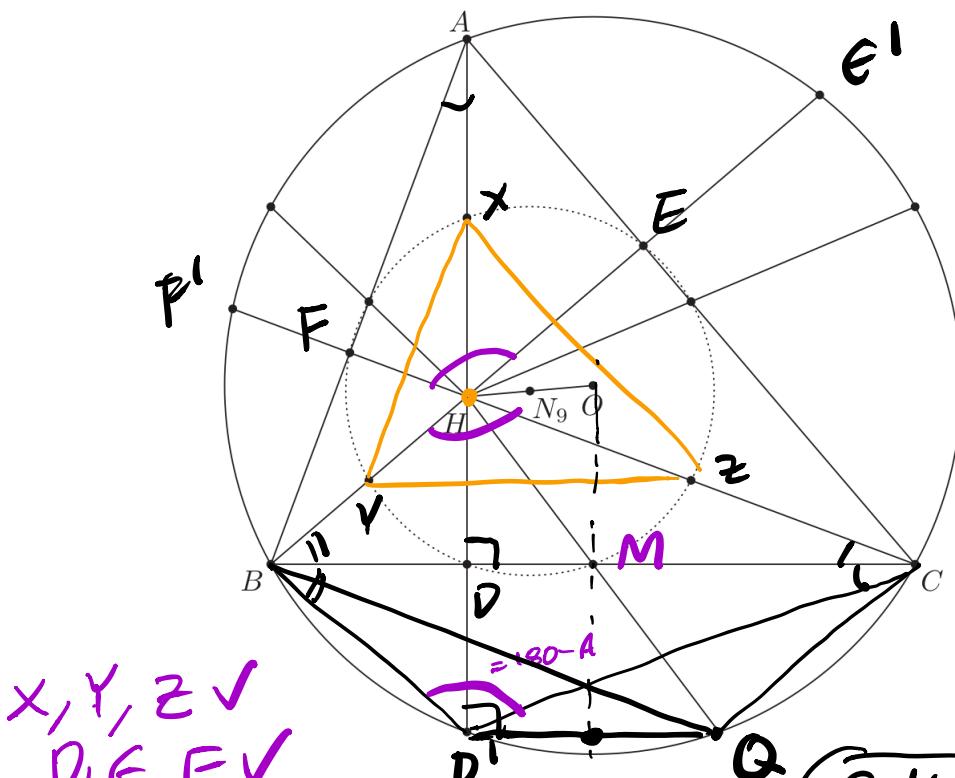

Thm. (9-pt Circle) All 9 of these points are concyclic. Their center  $N_9$  is on segment  $\overline{OH}$ .

Pct. Homothety centred at P

sends point  $X$  to  
point  $X' \in \overleftrightarrow{PX}$   
such that  $\frac{PX'}{PX} = k$ .

$$x = \text{midpt}(A, H)$$

$$y = \text{midpt}(B, H)$$

$$z = \text{midpt}(C, H)$$

Homothety  
w/ factor  $1/2$   
maps  $A \rightarrow X$   
 $B \rightarrow Y$   
 $C \rightarrow Z$

Figure 3.5C. The nine-point circle.

$X, Y, Z \checkmark$   
 $D, E, F \checkmark$

$\angle OCD'$

$$= \angle BAD'$$

$$= \angle BCF$$

since  $\triangle BFC \sim \triangle BDA$

$Q = \text{reflection}$   
of  $D'$  over  $\perp \text{ bis } BC$  =  $\overrightarrow{OM}$

$\rightarrow Q \in \text{circumcircle}$  because: 1)  $OD' = OQ = R$   
2)  $\angle BQC = \angle CD'B = 180^\circ - \angle A$

$\rightarrow HBQC$  since  $\triangle BHC \cong \triangle BD'C$   
 $\cong CQB$   
 $\text{is parallelogram}$

$\rightarrow \text{Diagonals bisect} \leftrightarrow \text{parallelogram.}$

So  $M$  is mid.pt. of  $BC$  and of  $HQ$

$\rightarrow Q$  is reflection of  $H$  over  $M$ .

Corollary:  $N_A = \text{mid pt}(OH)$

Proof: Homothety and ratio  $\frac{1}{2}$

so  $\frac{HNa}{HO} = \frac{1}{2}$  and they are collinear.

Alternate proof

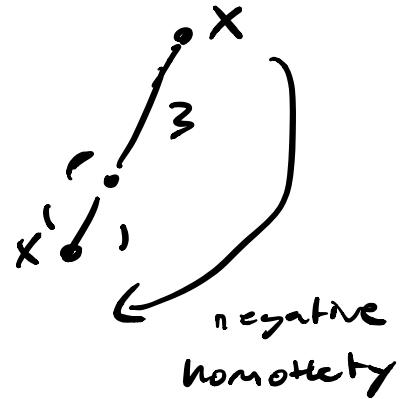

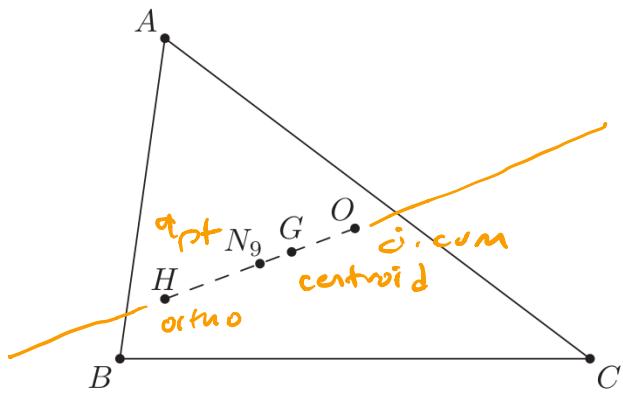

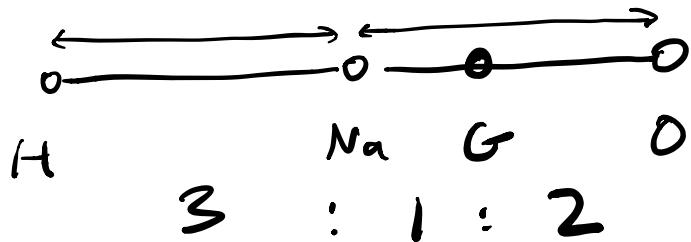

Figure 3.5D. The Euler line of a triangle.

**Lemma 3.13 (Euler Line).** In triangle  $ABC$ , prove that  $O, G, H$  (with their usual meanings) are collinear and that  $\boxed{G \text{ divides } OH \text{ in a } 2 : 1 \text{ ratio}}$ . **Hints:** 426 47 314  
why?

Problem. Compute the ratio  
 $HN_9 : N_9G : GO$ .

$$3 : 1 : 2$$

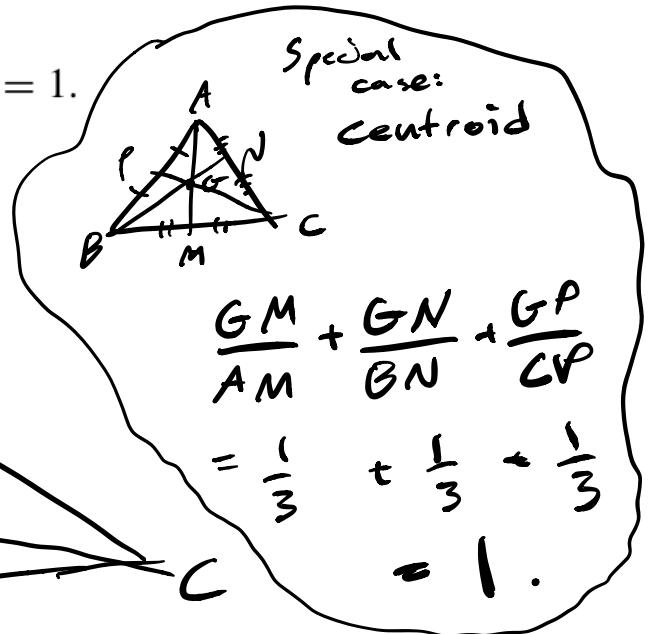

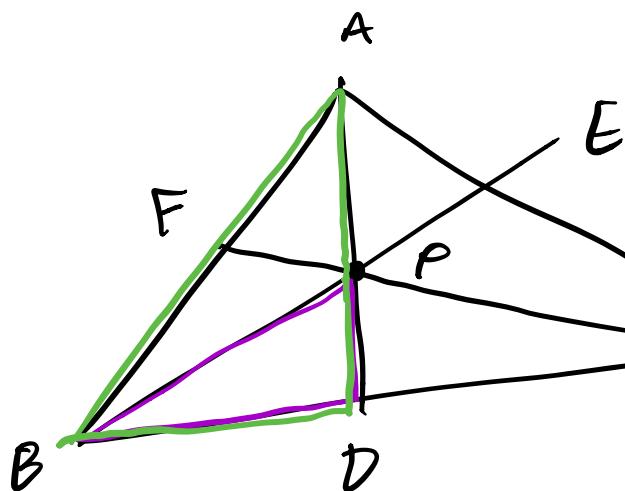

Homothety around  $G$  w/factor  $-\frac{1}{2}$  sends  
 $A \rightarrow M, B \rightarrow N, C \rightarrow P, O \rightarrow N_9$   
 $\odot(ABC) \rightarrow \odot(MNP)$

**Problem 3.18.** Let  $\overline{AD}, \overline{BE}, \overline{CF}$  be concurrent cevians in a triangle, meeting at  $P$ . Prove that

$$\frac{PD}{AD} + \frac{PE}{BE} + \frac{PF}{CF} = 1.$$

Hints: 339 16 46

Hint: Proof of Ceva's theorem.

$$\frac{\frac{PD}{AD}}{\frac{AD}{AD}} = \frac{[PDB]}{[ADB]} = \frac{[PDC]}{[ADC]} = \frac{[PDB] + [PDC]}{[ADB] + [ADC]} = \frac{[BPC]}{[ABC]}$$

$$\frac{PD}{AD} + \frac{PE}{BE} + \frac{PF}{CF} = \frac{[BPC] + [(CPA) + (APB)]}{[ABC]} = \frac{[ABC]}{[ABC]} = 1.$$

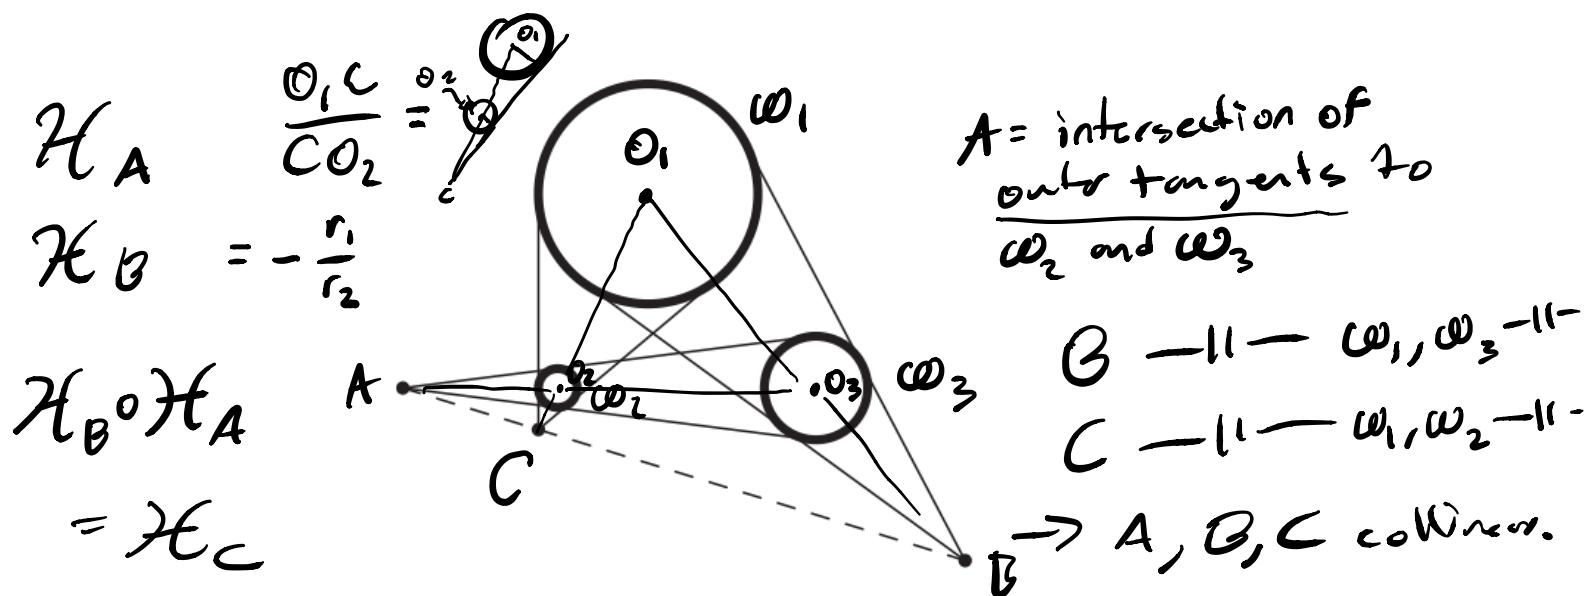

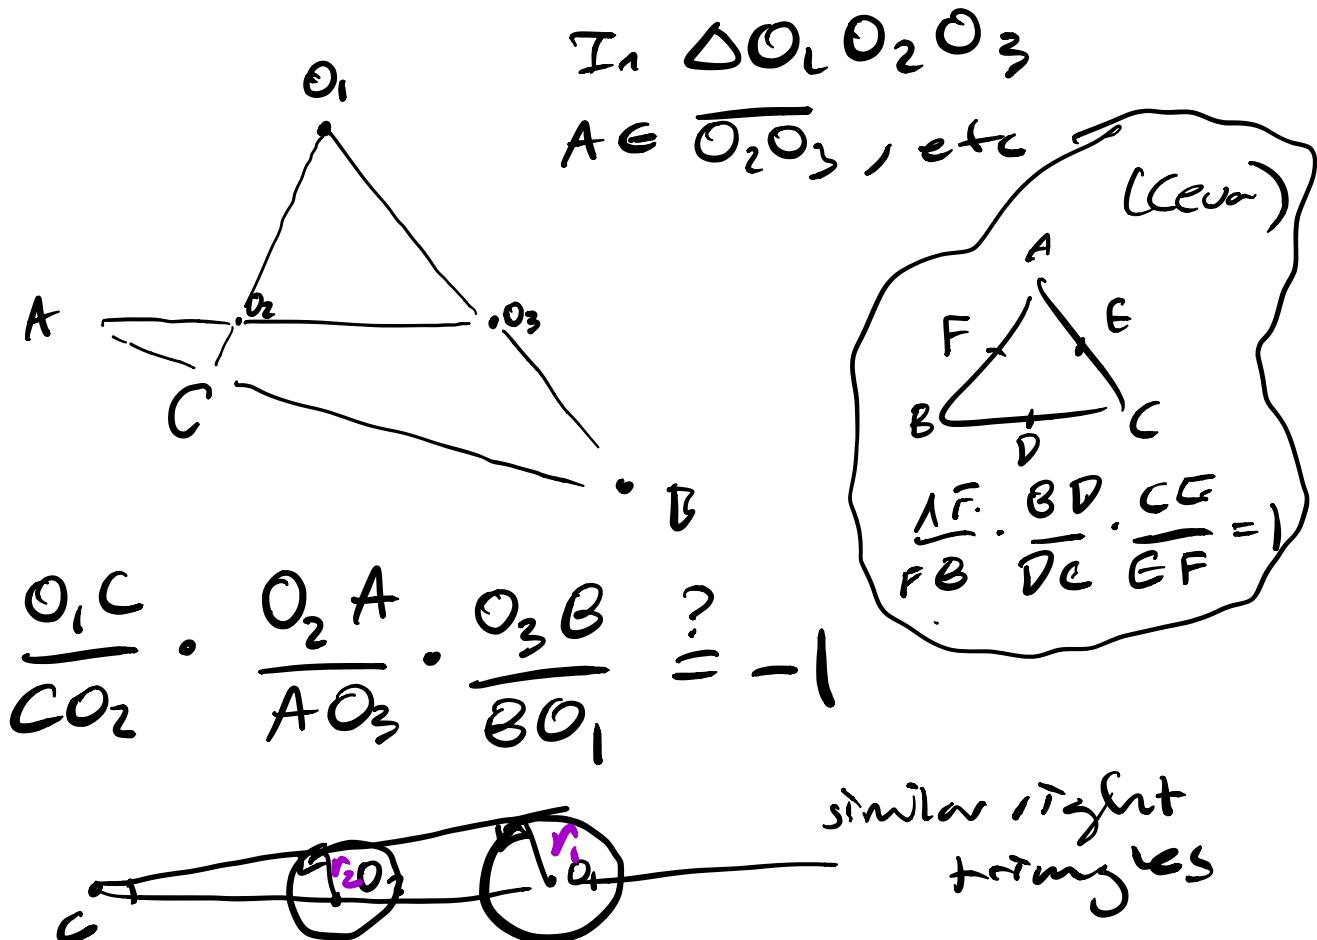

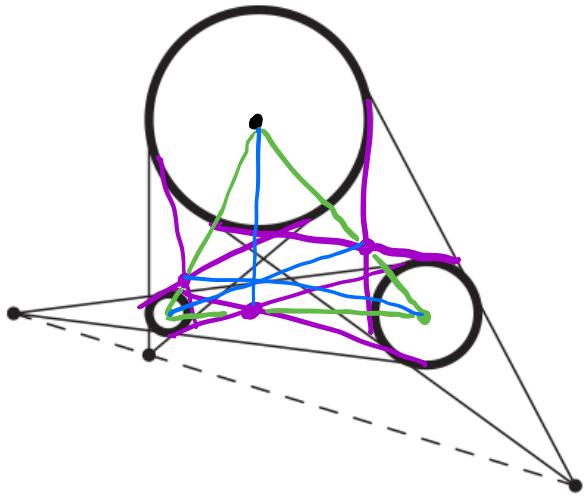

Figure 3.7A. Monge's theorem. The three points are collinear.

Hint: Menelaus' theorem.

**Figure 3.7A.** Monge's theorem. The three points are collinear.
