

Move a Stick!

Here is a series of Addition and Subtraction problems that are solved for you with Roman Numerals. However, on further investigation, you will notice that the numbers aren't accurate. This is because one of the Roman Numerals is incorrectly written. Can you reverse the order of "sticks" to fix the equation?

1. $VI + II = VI$

2. $IV + IV = X$

3. $XI + IV = XIII$

4. $XXI + XI = XXX$

5. $XIV + VI = XXII$

6. $XIX - IX = VIII$

7. $XXIV - VI = XX$
